Profile Statement

I am a Frontend Developer and I decided to change my career in November 2020. Previously I was an Admin and Graduated from Airlangga University with a Bachelor of Economics Degree. I started learning to code because I'd like to design, build things, and solve problems. Currently, I am looking for an entry-level position to begin my career as a junior front-end developer in a professional organization to contribute and apply what I have learned and expanded my learnings and skills.

Skills

- Javascript
- HTML 5
- CSS 3
- Git & Github
- Bootstrap

ELPT UNAIR   December 2018
Score 460/677

Projects

PT Enha Duta Econsindo
https://enhade-firzatullahd.vercel.app
(On Progress)

As a contributor, I do slicing from **Figma** to **Next Js** and designed with **Sass**. The website is developed using **Sass**, **React Js**, and **Next Js**, for the time being, the website will be made static by fetching data from the JSON file that has been prepared, but on further development, CMS will be added, thus making client manage content easier.

Personal Website   https://personal-website-veli.vercel.app

I developed a personal website to market and build a personal brand of myself as a developer and also display the projects I have worked on. My Personal Website was developed using **React Js**, **Next Js**, and **CSS**

Capture   https://capture-five.vercel.app/

Capture is a creative profile for a photography company website. Implemented animation in between components event with **framer motion**. Written in **Javascript** and developed with **React js**

Music Player

https://music-player-topaz.vercel.app/

Music player is a digital music service that gives you access to streaming lots of lo-fi songs. The technology used in developing React Music is **React Js**, **node-sass**, and **fontawesome**, the audio data used is taken from https://chillhop.com/.

Ignite

https://ignite-nu.vercel.app/

Ignite is a platform to find information and discover video games, using the REST API provided by rawg.io and the project was developed with **ReactJs**, **Redux**, **Styled Components**, and **Vercel**.

React Quiz App

https://quiz-app-wheat.vercel.app/

React Quiz App is a project that gives you random questions with multiple choice which I got from **Trivia API**, and after you answer the question your score will appear. This project is developing using **React TypeScript**.

Wardah 3D Effect Card

https://velizhaar.github.io/wardah-3d-card-effect/

Wardah 3D Effect Card is a project card animation with Wardah Two Way Cake for the product. The technology used in developing this project is **Javascript** and **Mouse Events** for 3d animation.
